

attract foreign investment by offering trusted public e-services

OECD reports define a direct link between foreign investment volume and court transparency. The more transparent and effective the courts are, the more willingness there is to invest in the country.

courtal

Courtal is a court information system that digitizes procedures to keep them simple, transparent, and fast.

Removing redundant processes and duplicate paperwork from court procedures allows to build more efficient court systems. When all judicial proceedings are on one digital platform, it makes it much easier for every user to have access to relevant information and the system itself is more transparent and secure.

Characteristics of a digital court system:

Why digitize justice?

- Transparency in the justice system
- Open business environment
- Cost-effectiveness in the justice system
- Higher availability of public services
- Ease of planning and monitoring
- Efficient management on cases
