

managing your
address data
so no one gets
lost.

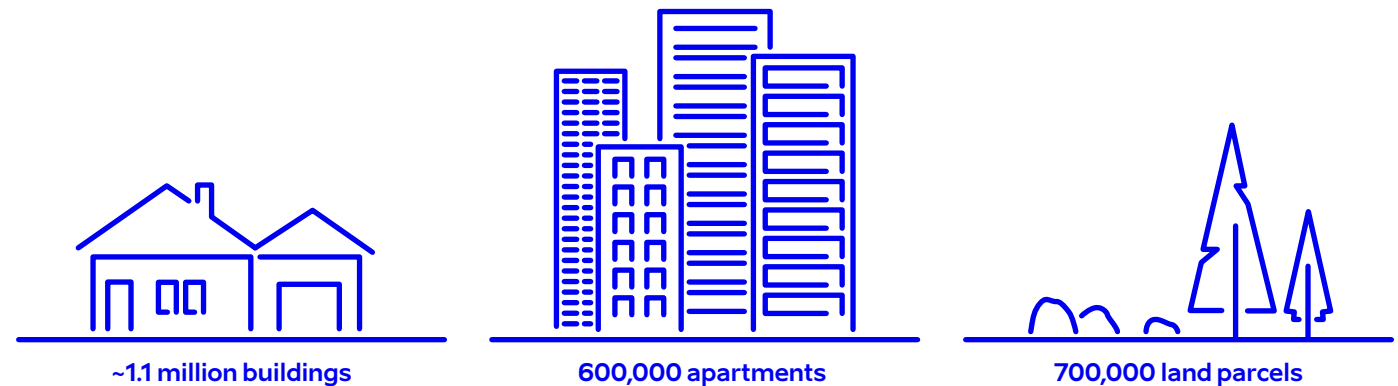

everyone is
counted.

Before transitioning to our Address Management System, more than half of Estonian address records were faulty or missing vital information.

address enforcement

With our address enforcement solution, we helped build an accurate and well-organized Address Information System, which now has more than 2.4 million addresses indexed in Estonia.

In the Estonian data system there are now 2.4 million objects with addresses, including:

*Data as of 25.05.2017, www.maaamet.ee

Key benefits:

- accurate address data is a cornerstone of an organized public sector
- useful for everyone, including national registers and private sector enterprises
- improves the overview of a country's infrastructure management
- equally applicable in countries without a traditional street network

Accurate address data helps save lives!
