

public sector budget management

Our solution is based on an “in-house banking” principle for governmental institutions and is responsible for managing and supervising the spending process of the organisation’s budget. The system covers the functionality necessary for dealing with money transactions between institutions within the system and external institutions through commercial banks.

Main features:

payments, direct debit payments, and short-term payments

configuration management

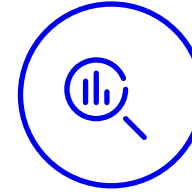

interface to stock market real time data feeds

securities trading

funds reservation / booking

compliance monitoring and reporting

loans and credit cards

Key advantages:

- up to 10 times reduced budget management costs
- reduced transaction costs
- centralized control, reporting and compliance monitoring
- enhanced transparency of the spending process

Target groups:

- national government
- local and municipal governments
- public institutions and organizations
- large private enterprises and organizations

one of the leading experts in finance and e-governance it-solutions

The Public Sector Budget Management system helps to administer and monitor government and public sector budget spending. Our solution is applicable for managing the whole state budgets, smaller local governments and also every other organization dealing with budget management.
