

network
monitoring
solution for
critical com-
munication

OSSWare platform

OSSWare Platform is a dashboard, which shows key network performance indicators and generates alerts in case of deviations.

Key benefits:

- allows your engineers to focus on critical events and faults
- a single platform for monitoring multi-vendor, multi-technology networks
- provides real-time operational network statuses in different hierarchical layers
- includes a set of tools to accurately find root causes on deviations
- reliable, user-friendly interface

Target group:

- state and local government

Company profile

Reach-U is a software development company with more than 20 years of experience in location based solutions, GIS, and cartography.

Serving more than 343 million subscribers of 25 operators globally makes Reach-U one of the largest providers of location-based services to mobile operators.

Reach-U developed the first civil safety application (CSA) platform in the world to incorporate live positioning.
