

300+ mln time stamps are issued every year to customers around the world

Time-Stamping Service

The Timestamping Service provides cryptographic proof that specific data existed at a particular point in time by securely linking it to a trusted time source. Once data is time stamped, it cannot be changed without detection, making the time stamp reliable and legally valid evidence for digital processes and audits.

SK ID Solutions provides a qualified Timestamping service, is included in the European Trusted List as a qualified trust service provider and delivers the service with a high level of availability, having met 100% of its service level agreement (SLA) since August 2022.

Widely used in:

- Long-term electronic signatures
- Document signing and archiving
- Technical systems for time-stamping log entries and events
- Proving the existence of data at a specific point in time
- Confirming the issuing or receipt of digital data, such as invoices, transactions, or documents
- Providing time-based evidence for transactions and documents
- Proving intellectual property ownership, such as photos, trademarks, and other digital assets

Key benefits:

- **Efficiency and cost savings** - Timestamping can be used instead of manual or notary-based processes, helping organizations save time and operational costs
- **Secure and reliable service** - the service is based on Public Key Infrastructure (PKI) and trusted time sources, ensuring legally valid time-stamps and making any later changes detectable
- **Qualified and trusted** - SK ID Solutions is a pioneering company in Europe for issuing eIDAS-qualified time-stamps and is included in the European Trusted List as a qualified trust service provider
- **High availability** - the service delivers a high level of availability, with SK ID Solutions meeting 100% of its service level agreement (SLA) since August 2022.
