digital product creation

Proekspert has been creating solutions for IoT and Industry 4.0 since 1993—long before they became trends.

We provide a full range of services, from business analysis to creating ready-to-market products. We give our customers a competitive edge by testing new business ideas quickly, while managing possible risks, and taking responsibility for the entire product development process.

Our portfolio is extensive, and includes innovations such as an intelligent thermostat with applied machine learning, smart beds and tables, parking systems, frequency converters, solar inverters, data-driven smart HVAC models, and more.

How we work:

Key benefits:

- **competitive expertise:** our teams bring experience and broad perspectives to your business, thus ensuring product quality
- **speed:** our optimized development practices reduce production time, and ensure that your product makes it to market faster
- **new technologies:** our expertise in a variety of fields allows you to implement the latest technologies on-demand and with ease

Target group:

IoT and Industry 4.0, man-machine interfaces, fintech solutions, data-driven solutions
