BUSINESS OVERVIEW:

Evocon is a cloud-based production monitoring solution that provides manufacturers with real-time information about the performance of their machines and factories.

Evocon automates and digitises the collection of production data. And by visualising machine data intuitively, we make sure that everyone in the company understands whether machines are performing as planned. The digitisation and visualisation of data empower manufacturers with knowledge on what to improve and what impact different activities have on efficiency. It also gives them a platform for smart decision-making — where to invest and what areas need the most attention.

By introducing transparency, we help companies seek a way forward based on what their data says.

SERVICE OVERVIEW

- **Unbiased, transparent information from the shop floor**
With Evocon's automated production monitoring system manufacturers gain visibility into their production process so they can start making decisions based on facts, not guesses.
- **Empowering people to be more productive**
It's easy for teams to have focused conversations about production when they have the one reliable source of information provided by Evocon.
- **An intuitive and easy to use OEE system**
Data only makes a difference if it gets used. Evocon makes collected production data easy to understand for everyone in the company.
