

warehouse pickertool

Warehouse Pickertool is a warehouse order assembly and delivery management system, whereby everyone involved in the process receives prompt real-time information regarding orders and the status of order picking.

Target groups:

Key benefits:

- Unique and customisable algorithm for order sequencing and merging/splitting
- 99.8% less picking errors
- 20% increase in picking speed
- No special training required for pickers
- Usable on any tablet
- Real-time overview of warehouse work status
- Change approval workflow
- Low upfront investment compared to competition

Our Strengths:

- 10+ years of experience working with warehouse and logistic solutions
- System is designed "in the field" with actual pickers
- Can integrate with any ERP and carrier system
- 24/7 support and high availability

References:

Leading warehouse operator in Estonia, Latvia and Lithuania.

improve the entire work organisation of your warehouse through 99.8% less picking errors and a 20% increase in picking speed
