hospital information system

Healthcare faces challenges world-wide of rising costs, limited budgets and increasing demand from an ageing population. Nortal's Hospital Information System is a modular, process-driven solution that supports patient-centered care and optimizes the flow of both medical and financial processes. Intelligent use of existing data guides the users in their daily work.

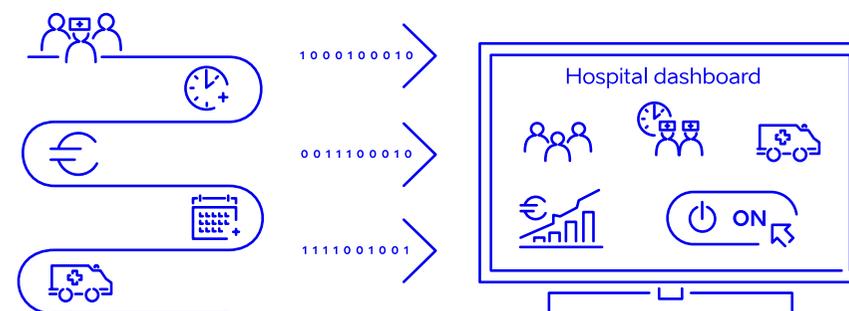

The system significantly reduces the administrative workload of hospital staff, enabling the clinical personnel to focus more on the actual diagnosis and treatment, ultimately improving the quality of the hospital's medical care.

Targets

- Hospital management
- Health/Social affairs ministries
- Medical associations

Key benefits:

- Higher quality medical care
- Reduced administrative workload
- More efficient resource management
