

3,8 million  
end users in  
the Baltics and  
Belgium

# Smart-ID

Smart-ID is an award-winning mobile digital identity solution that enables users to securely authenticate to digital services and create legally binding electronic signatures using a smartphone. Used by millions across the Baltics, Smart-ID is the most popular personal identification solution in the region and is also available in Belgium.

Designed for secure and intuitive digital access, Smart-ID supports both cross-device QR code login and same-device App-to-App authentication. These modern authentication flows help organizations deliver faster, smoother, and more fraud-resistant user journeys across desktop, mobile web, and in-app services. Its large-scale adoption demonstrates how mobile digital identity can support trusted digital interactions between citizens, businesses, and government institutions.
