

# smart micromobility infrastructure

Bikeep provides smart micromobility solutions to tackle urban mobility challenges. Smart bike parking does not require physical keys or locks but can be opened via a contactless card or mobile app.

## Main functionalities

- Smart lockers, bike racks and scooter stations that are opened with an app or contactless card take away the hassle of remembering to carry your own lock or key.
- E-bike charging
- Secure bike racks that lock both the frame and front wheel, with camera surveillance
- Multiple possibilities for payment systems (options for rent, paid method, free, monthly or pay as you go)
- Personal and rental scooter stations that offer various business models

## Key benefits

Bikeep offers expertise, maintenance and the whole cycle, from manufacturing to upkeep to app solution. The variety and expertise make Bikeep a micromobility enabler and a trusted partner.

## Target groups

Transit companies, real estate companies, municipalities, campuses, shops and supermarkets, restaurants.

## Value created

Micromobility is becoming the preferred form of commuting in urban areas due to increased congestion and limited car parking. People wish to commute with choice and freedom when they feel safe and solid infrastructure is in place. Urban planning is becoming smarter, more sustainable and greener. Bikeep supports the smart city concept by providing the infrastructure to achieve this.

It is calculated that there is a 24 x Return on Investment with cycling infrastructure solutions such as Bikeep when including reduced congestion and additional health benefits. Other values include: attracting new customers and businesses to commercial real estate; the more efficient use of land; stopping thefts; healthy and responsible corporate culture; reducing businesses' carbon footprint and more sustainable mobility.

micromobility is becoming the preferred form of commuting in urban areas due to increased congestion and limited car parking
