

Authentigate

Authentigate is an all-in-one identity verification and data-sharing platform for secure authentication with the most popular Baltic eID methods. Through a single integration, businesses can connect Smart-ID, Mobile-ID, eParaksts mobile, and Estonian ID card to verify identities, access key user data, and support compliance with GDPR, AML, and KYC requirements.

Authentigate combines multiple eID providers into one secure gateway using the OpenID Connect protocol, allowing businesses to authenticate users and request verified attributes such as name, personal code, date of birth, country, and age-related data.

Key benefits:

- One integration for the most popular Baltic eID methods
- Verified user data on demand
- Support for GDPR, AML, KYC, and PSD2 compliance
- Transparency and consent for users
- Simple integration based on OpenID Connect
- Reduced complexity and lower maintenance for businesses
- Demo environment available for testing

Use cases:

- **Onboarding and registration:** customer onboarding, account opening, seller onboarding, patient onboarding.
- **Age verification:** age checks for eligibility, age-restricted product purchases, event access verification.
- **Booking and access:** appointment scheduling, ticket booking, package pickup verification.
- **Compliance and security:** KYC and AML checks, ensuring GDPR compliance.

Why organizations choose Authentigate?

- Connects Smart-ID, Mobile-ID, eParaksts mobile, and Estonian ID card through one secure gateway
- Allows businesses to request verified attributes such as name, personal code, date of birth, country, and age data
- Gives users full visibility into what data is requested and requires consent before sharing
- Most businesses can integrate within a few days using the API and documentation, according to the site
- Well suited for small and medium-sized businesses
