

Mobile-ID

Mobile-ID is a SIM-card-based digital identity solution that enables users to securely authenticate themselves online and create legally binding electronic signatures using their mobile phone. It allows users to access online banking, government portals, and other digital services directly from their phone, as well as sign documents, confirm transactions, and approve activities securely.

Based on proven PKI (Public Key Infrastructure) technology, Mobile-ID is widely used in Estonia and Lithuania, where it is already available in more than 1000 e-services. It provides convenient access to digital services without the need for a smart card reader or specialized software.

Key benefits:

- Strong authentication and legally binding electronic signatures
- SIM-card-based digital identity always within reach
- No smart card reader or specialized software needed
- Secure and PIN-code-protected usage
- Online access equivalent to an ID card
- Cross-device usage
- Easy and fast implementation for e-services

Why organizations choose Mobile-ID?

- Used by more than 700,000 users in the Baltics
- Over 685,000 users in Estonia and Lithuania
- Included in the European Trusted List and compliant with eIDAS
